

One MAYA, one visual language

Decision brief + source audit + proposed rules. Original three-page V3 guide included in full at the end.

Keep the identity. Replace the conflicting rules.

The existing Aesthetics.pdf is a real design reference, but it is not a runtime stylesheet. Operations explicitly cites its V3 rules. Other pages copy or override styles independently, so the PDF is only partially enforced.

Create a V4 review edition rather than overwrite history. V3 promotes tiny uppercase labels, wide tracking, serif headings, pill geometry and pervasive glass. Your new brief calls for readable sans-serif data, semantic colors and calmer panels. These are deliberate changes to the standard.

Area	Current / V3 pattern	Proposed V4
Typography	Jost + Cormorant spread through interface and data.	Jost for about 95% of UI; Cormorant only for rare branding.
Hierarchy	Many tiny sizes, uppercase and wide tracking.	12 / 14 / 16-18 / 28-32px; sentence case.
Color	Bone-white V3 rules coexist with blue and local palettes.	One semantic palette; consistent four-status mapping.
Surfaces	Glass, solid panels and local overrides coexist.	Galaxy atmosphere; calm panels; glass only where useful.
Maintenance	Inline page styles and repeated component rules.	Shared tokens and component styles across Admin pages.

This document does not certify deployment, messaging, integrations or model availability. Those are separate functional checks. No routes, data logic, APIs or interactions are proposed to change.

What fonts are we using?

Static source inventory at commit 3af43c3. Counts below are declarations, not rendered text, pixels or user-visible proportions.

Retain Jost as the primary UI family. It already powers the Ad Campaign table you prefer. Restrict Cormorant Garamond to the MAYA wordmark or exceptional brand displays. Keep monospace only for genuinely technical values.

Surface	Jost	Cormorant	Other / inherited
Admin / status	90 (77%)	21 (18%)	6 (5%)
Outbound	4 (44%)	4 (44%)	1 (11%)
Marketing	26 (76%)	7 (21%)	1 (3%)
Operation Room	15 (63%)	5 (21%)	4 (17%)
Brief	47 (64%)	25 (34%)	1 (1%)
MAYA frontend	105 (56%)	78 (42%)	4 (2%)
Playground	110 (57%)	80 (41%)	4 (2%)

How to read the distribution

The audit counts font and font-family declarations, including inline styles and CSS strings. Overrides and duplicated pages are counted separately. A body font inherited by hundreds of elements counts once. Outbound therefore is not "44% serif" on screen. The proposed 95% target describes interface use, not source declarations.

The raw scan finds 37 font-size values and 38 tracking values across the inspected frontend sources. These include equivalent spellings and dynamic values. Normal weights include 300, 400, 500 and 600. This is evidence of drift, not a claim that every value is visible.

PDF text uses Helvetica for portable review. It is a specification document, not a Jost font specimen. A later browser specimen should validate the actual Jost rendering.

A strict, readable foundation

Proposed tokens. Approve the system before migrating application styles.

Role	Family / size / weight	Use
Metadata	Jost / 12px / 400	Dates, categories, hints. Line height 16px.
UI and data	Jost / 14px / 400	Tables, forms, navigation, status labels. Line height 20px.
Section title	Jost / 16 or 18px / 600	Sections and modal titles. Line height 24px.
Major metric	Jost / 28 or 32px / 500	Key totals. Line height 36 or 40px.
Brand exception	Cormorant / deliberate display use	Wordmark only by default. Never routine metrics or controls.

Use three weights: 400, 500, 600. Default tracking is 0. Use at most 0.02em for compact metadata when needed. Sentence case is the default. Retain uppercase only for the wordmark or a justified brand label.

Semantic palette

	Primary text	#F3F2EF	Warm neutral white
	Secondary text	#B5BECC	Notes and supporting copy
	Tertiary text	#929EAF	Dates and categories
	Accent / focus	#9FC6FF	Links, focus, selected state
	Not contacted	#B5BECC	Neutral gray + label
	In progress	#F2C078	Amber + label
	Booked	#76D6AF	Emerald + label
	Cancelled	#EEA0A5	Muted red + label

Status colors are text/icon accents over quiet tinted backgrounds, never the only signal. Verify at least 4.5:1 for normal text and 3:1 for required UI boundaries against the final composited surface.

Surfaces, geometry and motion

Preserve the galaxy. Make the information easier to read.

Layer	Proposed appearance	Where
0 / atmosphere	Existing galaxy; dark scrim under dense areas.	Page background.
1 / content	#101827, near-opaque. No heavy blur.	Tables and information panels.
2 / elevated	#182336 or equivalent dark translucency.	Cards; dropdowns can use restrained glass.
3 / navigation	Dark 84% fill; 20px blur; saturation 120%; subtle highlight.	Drawer, floating controls, popovers and modals.

Token group	Proposed standard
Spacing	8px base: 8, 16, 24, 32, 48, 64. Allow 4px only for icon/text micro-spacing.
Radius	12px standard cards and controls; 16px large panels; circle for icon buttons. Pills only for badges or segmented controls.
Border	1px subtle white highlight: rgba(255,255,255,0.10). Focus ring: 2px accent.
Shadow / blur	One elevated shadow: 0 12px 32px rgba(0,0,0,0.28). Blur tokens: none, 12px, 20px.
Motion	120ms feedback; 180ms menus; 240ms larger transitions. Ease: cubic-bezier(0.2,0,0,1).
Layers	Base 0; sticky header 10; dropdown 20; drawer 30; modal 40; toast 50.

Fallbacks: use an opaque elevated surface when backdrop-filter is unavailable. Disable decorative motion and shorten transitions for prefers-reduced-motion. Preserve existing scroll and responsive behavior.

Components that feel related

The visual migration preserves all existing interactions and capabilities.

Component	Current inconsistency	V4 treatment
Lead Station	Historic serif notes, tiny status rules and later Jost overrides coexist.	Names 14px/500; status and notes 14px/400; dates/tier 12px. White names, secondary notes, tertiary metadata.
Status and filter	Native controls and custom dropdown surfaces have differed.	One labeled badge treatment and elevated filter panel; consistent alignment, focus and padding.
Tables	Table typography, row spacing and panel fills vary by page.	Shared header, cell and row tokens. Subtle hover; quieter separators; retain sticky headers.
Buttons and icons	Pills, rectangular controls and varying SVG sizes coexist.	Common control heights and 20px icons; 40px target on desktop, 44px touch. Accessible names preserved.
Inputs	Local radius, padding and border choices.	Shared input treatment with focus, invalid and disabled states.
System snapshot	Dense technical text uses different hierarchy from Vault.	Same section typography; group roles beneath each configured model. No changes to model routing.
Outbound / Affiliates	Different shell and component rules can drift from Admin.	Reuse Admin atmosphere, navigation, panels, tables and controls.

Status rules

Use exactly Not contacted, In progress, Booked and Cancelled. Keep labels visible. Apply the same colors in every table, drawer, filter and summary. Do not infer or rewrite a customer status as part of styling.

Migration boundary and evidence

Review first. Implementation is a separate approval and verification stage.

What this review changes

Only this new static PDF and continuity notes. The existing V3 PDF is preserved. Its complete original three pages follow this page as a historical appendix. No production stylesheet, script, route or API has been edited.

Phase	Expected evidence
1 / baseline	Inventory frontend and Admin sources; inspect current page states and responsive widths. Static source counts are the starting point, not visual QA.
2 / shared system	Central CSS tokens and reusable component rules. Migrate Admin, Outbound, Affiliates, Operation Room, Marketing and Brief; scope public frontend/Playground explicitly.
3 / cleanup	Remove overridden or duplicated rules only after checking behavior and responsive states. Preserve account/project isolation.
4 / verification	Check default, hover, focus, selected, disabled, empty, error, long-content and mobile states. Compare all migrated pages.
5 / report	List fonts removed, colors consolidated, duplicate CSS removed, components standardized, files changed and remaining inconsistencies.

Evidence and limits

Sources: docs/Aesthetics.pdf (V3, all 3 pages); backend/status.html; backend/outbound.html; backend/marketing.html; backend/operations.html; backend/backend.html; frontend/index.html; playground/index.html; aesthetics/operations/index.html; related frontend styles and scripts.

The Operations page explicitly cites V3. The static scan found roughly 8,500 candidate visual declarations in 16 files, including repeated copies. It also found 28 raw radius values and 19 backdrop-filter expressions. These counts are authored-value evidence, not a computed cascade audit or a live deployment claim.

Remaining work: browser-computed style distribution, final font specimens, actual background contrast, keyboard/responsive visual checks and CSS duplication removal. Nothing in this PDF claims those implementation steps are finished.

Aesthetics

MAYA · V3 · THE CANON, DENSE

THE GOLDEN RULE

Page 1 is canon. Every other screen replicates. No screen invents its own button. If page 1 doesn't have a sibling, ask — don't extrapolate.

THE PILL — every interactive surface

BACKGROUND	transparent · hover <code>rgba(255,255,255,0.04)</code>
BORDER	0.5px <code>rgba(255,255,255,0.22 → 0.42 hover)</code>
RADIUS	100px capsule · 50% icon-circle
PADDING	6px 14px · 10px 18px inputs
BACKDROP	<code>blur(22px) saturate(180%)</code>
SHADOW	<code>inset 0 1px 1px / 0.28 + inset 0 -1px 1px / 0.18 + 0 4px 16px / 0.22</code>
TEXT	Jost 300 · 10px · 0.15em · UPPER · <code>rgba(245,250,255,0.85 → 1.0)</code>

TYPOGRAPHY

ROLE	SPEC	WHERE
Hero	Cormorant 600 · 72–168px · 0.22em	Splash, thank-you, modal h1
Section	Cormorant 300 · 22–26px	Modal h2, drawer headers
Caption	Cormorant Italic 300 · 11–12px	Inspo captions, voice whispers
Pill	Jost 300 · 10px · 0.15em · UPPER	Every button, every chip
Hint	Jost 300 · 9–11px · 0.32–0.50em · UPPER	Subwordmarks, hints

COLOR

TOKEN	VALUE	USE
Cosmic	<code>url('birth of a star.png')</code> on body	Bleeds through every screen
White	<code>rgba(245,250,255,0.85 → 1.0)</code>	All chrome text
Hairline	<code>rgba(255,255,255,0.22 → 0.42)</code>	Every pill border
Halo	<code>rgba(180,210,255,0.55) / 0.28</code>	Latest vision + Submit only
Pink	<code>#ff97b6 · rgba(255,160,200,0.55)</code>	Favorited heart
Error	<code>rgba(255,140,140,0.42)</code>	Toast error

Bone-white over cosmos. Blue tints — `rgba(200,220,255,*)` and `rgba(220,232,255,*)` — are forbidden on chrome.

CARDS

CARD	TREATMENT	NOTES
Reference chip	Canon pill · no glow	Hugs text via width: max-content
Uploaded inspo	Canon glass · no glow	Resize handle bottom-right
Vision — latest	Canon glass + halo · pulse 3.2s	Glow 0 0 8px/0.55 + 14px/0.30
Vision — older	Canon glass · no glow	Only one halo at a time
Favorite	Canon glass + halo · pulse 3.2s	384px · scroll-snap-x
Submit button	Canon glass + halo · 20% stronger	Same 3.2s cadence

MOTION

SURFACE	SPEC
Vision pulse	maya-vision-pulse · 3.2s ease-in-out
Submit pulse	maya-submit-pulse · 3.2s · 20% stronger
Wordmark breathe	maya-wordmark-breathe · 4s ease-in-out
Card fade-in	itemFadeIn · 0.8s cubic-bezier(0.16,1,0.3,1)
Screen + drawer	Native scroll-snap on both axes (browser physics)

All scrolling is native — no custom wheel handlers. The browser drives momentum, inertia, rubber-band, GPU compositing at the display's refresh rate.

FORBIDDEN

DON'T	DO THIS INSTEAD
Rectangular pills	Capsules only (100px radius)
Opaque card panels	Transparent + blur
Blue-tinted chrome	rgba(255,255,255,*) only
Letterspacing > 0.18em on pills	0.15em pills · 0.22em hero only
1px or 1.5px borders	0.5px hairline
Multiple glowing visions	Latest only — one halo
Gradient pill fills	Pure transparent · frost IS the effect
Auto-render on screen change	Explicit user action only
Conic-gradient borders, light sweeps	Plain hairline only
Custom wheel-event scroll handlers	Native scroll-snap only

CHEAT SHEET

LAYOUT	Centered · transparent · 0.5px hairline · 100px radius · blur(22px)
PILL	Just 300 · 10px · 0.15em UPPER · rgba(245,250,255,0.85 → 1.0)

HERO	Cormorant 600 · 0.22em · breathe glow 56–80px / 0.45–0.70
HALO	8px 1px / 0.55 + 14px 2px / 0.30 · 3.2s pulse
SCROLL	Pure native scroll-snap, both axes
EXCEPTION	Measurement labels – descriptor left, pill right

When in doubt: copy a page-1 sibling line for line. Don't invent.
